A quieter way to work with your documents.

Local files. Clear sources. Bounded memory.

This sample document contains fictional product planning material.

Finding a file should always feel immediate.

The target device has 4 GB of RAM.

Only 160 file rows are rendered at a time.

Directory metadata is stored on disk rather than in an unbounded list.

Every summary starts with its source.

A source card identifies the filename, type, full path, size and timestamps.

Important statements keep their original page anchors.

Numbers and dates are copied exactly from the source.

Small working sets, useful results.

The parser runs in an isolated process with a 256 MB ceiling.

The document is processed page by page.

The final section must remain represented in the summary.
